

Flow Measurement

SITRANS FM (electromagnetic)

Flow sensors / SITRANS FMS500

Overview

The SITRANS FMS500 is a magnetic flowmeter sensor suitable for volume flow measurement of liquids (conductive) and is the ideal product for applications in water abstraction, wastewater treatment, water distribution networks, and irrigation.

The rugged, fully welded design supports direct burial, constant flooding and to stand up a wide range of harsh chemicals found in water-based applications in many different industries.

Designed for highly accurate measurement in low-flow conditions, these meters can measure from very low velocities up to 10 m/s, giving it a very wide measurement range.

Combined with a flowmeter transmitter it is a traditional externally powered electromagnetic flowmeter system

Application

- Water abstraction
- Water treatment
- Water distribution network (leak detection management)
- Custody transfer water meters
- Irrigation
- Waste water treatment
- Filtration plant (e.g. reverse osmosis and ultra-filtration)
- Industrial water applications

The SITRANS FMS500 with its NBR or EPDM rubber lining is a flow meter sensor for all kinds of water applications such as ground water, potable water, cooling water, wastewater, sewage, or sludge applications.

Connected to the compatible transmitter SITRANS FMT020, either mounted remotely or as a compact unit, it forms the magnetic flow meter system SITRANS FM520 which can be used in almost all general-purpose water applications.

SITRANS FM520

Perfect match for a cost-effective solution for all water and wastewater applications. Standard measuring accuracy $\pm 0.4\%$ of the actual flow rate, optional a high accuracy calibration with $\pm 0.2\%$ of flow actual rate is available.

Benefits

- Zero Up and Zero Down installation capabilities
- NBR rubber liner for all water and wastewater applications
- EPDM liner specifically for drinking water applications requiring special approvals
- Soft elastomer facing provides high abrasion resistance
- Increased low flow accuracy for water leak detection
- Rugged construction with no moving parts for maintenance-free operation over many years
- Simple on-site upgrade to IP68 of a standard sensor allowing underground installation, permanent immersion or underwater installation
- Integrated grounding electrodes – no grounding rings required for many applications
- Short delivery time
- Built-in length according to ISO 20456 (up to DN 400 mm)
- SENSORPROM™ Technology provides an automatic upload of start-up settings and calibration data for easy commissioning
- Designed to allow in-situ verification for easy performance check
- In conformity with ISO 4064, OIML R49 and EN 14154
- Custody transfer approvals for cold water billing (MI-001)

¹⁾ DN 750, DN 1050 and DN 1100 (30", 42" and 44") not available with EN 1092-1 (PN 10 and PN 16) and AS 4087 flanges

²⁾ The value applies for measurement between 15 µS/cm and 5000 µS/cm at a reference temperature of 25 °C (77 °F)

³⁾ DN > 300 (12")

⁴⁾ The Ex variant is only available with IP64 protection and in remote mounting

FMS500 (7ME653) with FMT020 (7ME694)

The FM520 water meter, which combines the FMS500 sensor and FMT020 transmitter, is EU-type approved according to MID Directive

2014/32/EU of the European Parliament and of the Council of 26 February 2014 on Measuring Instruments (Annex III – Water Meters

Flow Measurement

SITRANS FM (electromagnetic)

Flow sensors / SITRANS FMS500

Technical specifications (continued)

MI-001). It also meets OIML R49 recommendations for Class 1 and 2 (Water meters for cold potable water and hot water).

Extensive testing has ensured its superior measurement accuracy, even under challenging inlet and outlet conditions. This allows for flexible installation in tight spaces without the need for pipe re-routing, as the FMS500 functions as a OD/OD device for both Class 1 and Class 2 accuracy, requiring no inlet or outlet sections.

Furthermore, while primarily a cold water meter, the FM520 has been rigorously tested and passed at temperatures up to 50 °C (122 °F), including 30 °C (86 °F). This robust performance means it can be used for custody transfer (CT) purposes up to 50 °C (122 °F).

G00 - Without custody transfer approval

Transmitter label

Flow Measurement

SITRANS FM (electromagnetic)

Flow sensors / SITRANS FMS500

Technical specifications (continued)

FM520 approvals are valid for:

Sizes	DN 50 ... 300 (2" ... 12")
Performance range	• R400 Class 2 • R200 Class 1
Installation	• All orientation • Compact or remote with max. 500 m cable • Approved for forward metering but also designed to be used in reverse
Sensitivity class	U0D0 (The meter requires 0xD straight pipe upstream and 0xD straight pipe downstream from the sensor)
Temperature class	• T30 (0.1 ... 30 °C) • T50 (0.1 ... 50 °C)
Pressure	MAWP 16 (Maximum Allowable Working Pressure)
Electromagnetic class	E2
Mechanical class	M1, Class B and O (building and outdoors)
Climatic class	-20 ... 55 °C (-4 ... 131 °F)
Power supply	• 12 ... 42 V DC, 12 W • 100 ... 240 V AC, 50 ... 60 Hz, 25 VA
Software	Designed according to WELMEC 7.2

Communication modules ¹⁾	HART, PROFINET, MODBUS and ETHERNET IP have been certified and can only be used where national regulations permit it. The reading of ancillary devices may be used for testing and verification and for remote reading of the water meter.
--	--

¹⁾ Communication module need to be ordered together with the system (FM520), a retrofit of the communication module is not possible since it would break the CT seals.

Special MI-001 settings:

- Unit: m³
- Low flow cut-off: 0.9 mm/s
- Digital output: pulses

For other factory settings, see the operating instructions.
